SilentDesign Acoustic Panels / LivingWall / UniqueDesign Panels

My wall and ceiling design

Lived values

Editorial

Our love of wood and its positive, natural properties have formed the basis of our company for more than 65 years. Today, we apply all of our expertise to produce innovative and, above all, healthy living floor and ceiling solutions that are ideally suited to life with all its different requirements, while also protecting the environment.

There is no doubt about it: wood plays a major role in creating a really great, natural atmosphere for your home. Experts call it “Biophilic design”. The term “biophilia” comes from Greek, with “bio(s)” meaning life and “philia” meaning love – it describes a deep connection with life and nature, even in our living spaces: in our increasingly urbanised world, we long for nature within our own four walls for our well-being. This simple notion concept has now developed into a significant trend. Designers and architects are orientating their concepts towards creating a positive connection between people and nature.

Bring a little piece of nature into your home and design rooms that give you tranquillity and renewed energy. Let yourself be inspired and discover what's possible with natural materials and clever ideas.

Bernhard ter Hürne

The acoustic solution with Scandinavian flair

My SilentDesign acoustic panels

SILENTDESIGN

Sound meets beauty

With craftsmanship based on 65 years of experience, we have created not only a product, but a statement.

- **A real eye-catcher:** The new panels from SilentDesign look great in entrances, living rooms, bedrooms, or home offices thanks to their natural wood and slatted look.
- **Clever structure:** The panels not only ensure pleasant room acoustics – they also add highlights, give rooms structural integrity in terms of interior design, and create a well-thought-out feel-good atmosphere with natural materials.
- **Expected craftsmanship:** Clean chamfered edges, hand-sanded surfaces, and a super-matt, easy-care natural finish for perfect surface protection against dust and UV light.

Oak Moldau Fineline* | long panel

HEALTHY LIVING

An atmosphere of well-being

Our acoustic panels are not just masters of sound absorption, but also architects of well-being. Their unique capabilities make a considerable contribution towards the improvement of room acoustics and therefore the feel-good factor.

With different grades of absorption, we offer individual solutions for varying needs. Disturbing reverberation is efficiently reduced, resulting in a pleasant and balanced soundscape.

Of course, we also place particular emphasis on healthy living with regard to the materials we use. We also pay close attention to how they are processed. There is no unnecessary use of adhesives or low-emission materials. Only healthy real wood is used, which is protected by a natural oil finish.

Easy to maintain

Hygienic

Natural living atmosphere

Pleasant room acoustics

SMART PROPERTIES

This is living quietly

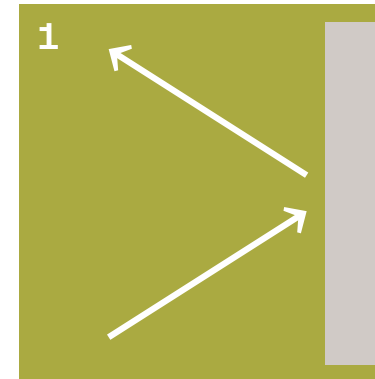

Reverberation is the phenomenon whereby sound waves in a room remain audible even after the original sound source has ceased. This means that the sound can be heard several times as it overlaps itself. Sound absorption, on the other hand, is the ability of materials or surfaces to absorb sound waves instead of reflecting them. Different levels of optimisation can be achieved for the room acoustics thanks to the various installation options (see right).

But SilentDesign can do even more ...

- **Simple installation.** Installation is extremely easy and designed to be particularly user-friendly, even for DIY enthusiasts. (Various assembly options for individual requirements)
- **Versatile design options.** Our panels provide effective sound insulation in offices, schools, surgeries and other public spaces. This promotes better communication, a pleasant working atmosphere and increased concentration and performance.
- **Easy-care surface.** Many of the veneer panels available on the market are offered without a protective finish. Thanks to our natural oil finish, our products are easier to care for and therefore better protected against yellowing and dirt.

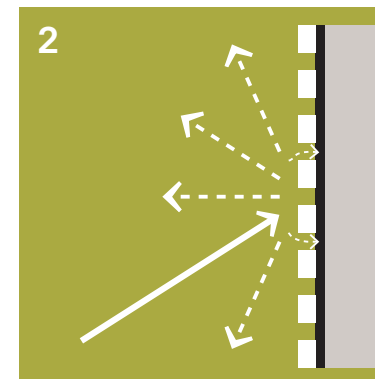

Oak Tiber* | panel

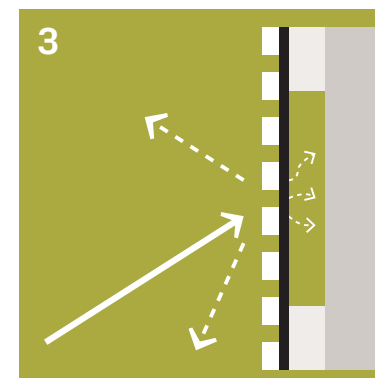

Without SilentDesign acoustic panels

When sound waves hit a hard surface, there is usually a direct reflection whereby the sound is reflected back with the same intensity. This has a negative effect on the room acoustics and leads to an unpleasant sound environment. Echo effects and the perception of reverberation negatively affect the quality of living.

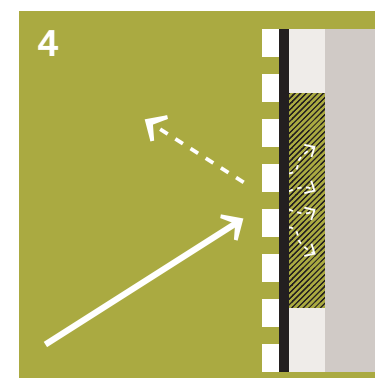

SilentDesign acoustic panels mounted directly on the wall

SilentDesign acoustic panels have an intelligent structure that creates a dispersion and diffusion effect on sound waves. The sound waves are broken up and converted into smaller waves when they hit the acoustic panels. The ability of the felt to absorb sound also contributes to improved room acoustics. (Absorption class D)

SilentDesign acoustic panels on substructure

The installation of our SilentDesign acoustic panels on a slatted substructure with a thickness of 60 mm or 100 mm leads to significantly improved results. In this way it is possible to achieve sound absorption class B or C.

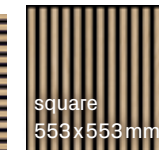

SilentDesign acoustic panels on substructure incl. Insulation

The best effect is achieved by additionally placing mineral wool between the slatted substructure. This leads to optimum control of the room acoustics and the reduction of reverberation, ultimately leading to the achievement of sound absorption class A.

Scandinavian interior design

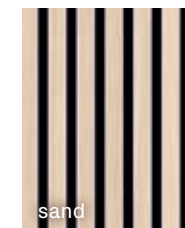

1 Format

To accommodate different room heights and create larger, seamless surfaces, our acoustic panels are available in three formats. The squares can be arranged individually, made into a pattern or used as stylish accentuation. These come in Walnut and Oak Sand and Natural.

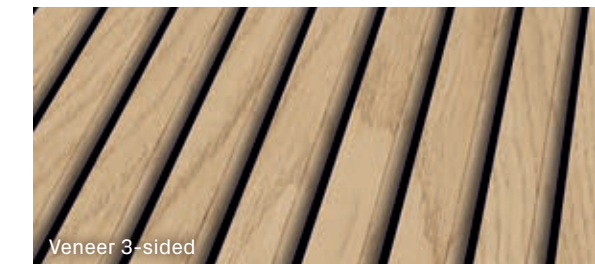

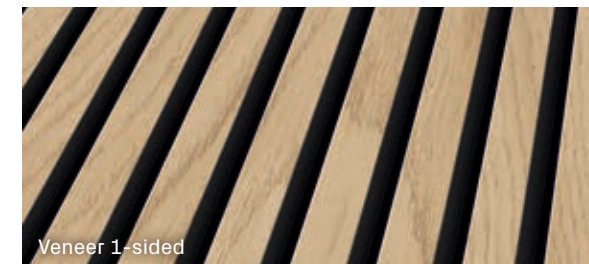

2 Decor colour

Scandinavian fresh or as if created by nature?
Find the right colour for you!

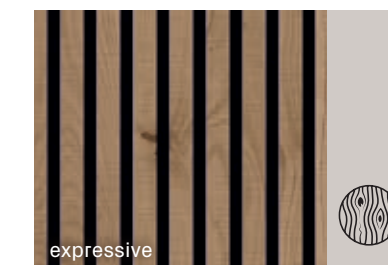

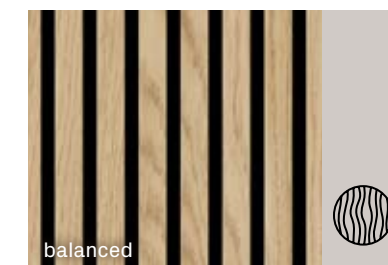

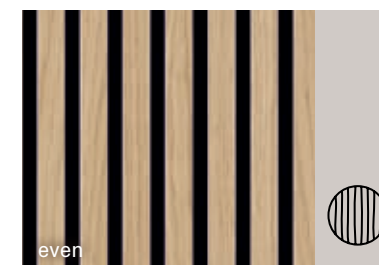

3 Slat design

You can choose between one-sided or three-sided veneers in Oak Natural, Oak Sand, and Walnut Macchiato, depending on your preference. The darker shades Oak Carbon and Oak Graphite have a one-sided veneer. The white colours only come in 3-side veneer.

4 Grade

Thanks to their fine wood grain, our panels create a harmonious, natural ambience. Those who prefer a subtle look will also find the colours Sand and Natural in a particularly even grade.

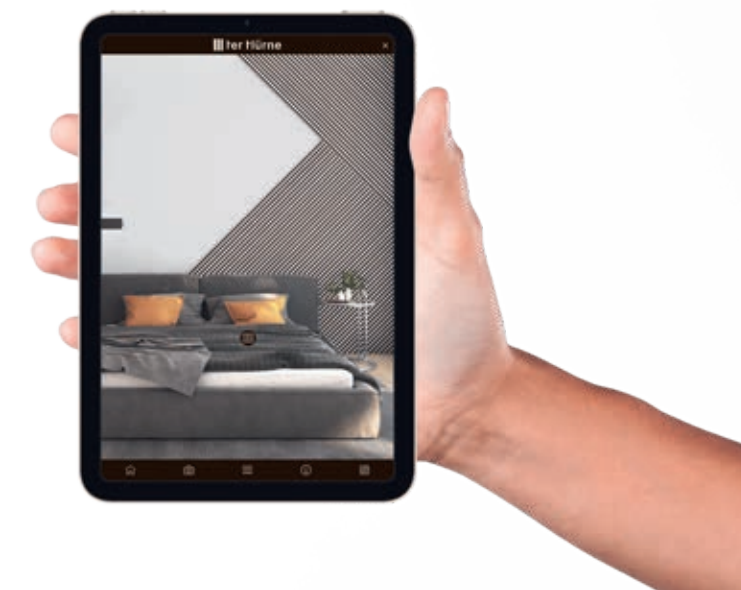

Here you can experience pure Scandinavian living – our panels bring the "hygge" concept into your home – with natural materials and

vibrant colours. You can feel the natural wood with every touch creating a uniquely inviting atmosphere.

Your acoustic panel deserves the best frame!

More than just mouldings for acoustic panels – they are the detail that makes all the difference. Choose from skirting boards, finishing mouldings and elegant frame mouldings for square panels and showcase your ideas perfectly.

Finishing moulding

The perfect finish for your wall design

This high-quality moulding creates a harmonious transition between the acoustic panel and the wall. Open side surfaces disappear. Made from robust HDF, this finishing trim impresses with its stability and durability. It is easy to maintain and can be cut to the desired length with minimal effort.

Frame moulding

For square acoustic panels

The frame mouldings ensure a precise finish and a stylish look – whether for individual squares or larger areas. With different lengths for one, two or three squares and the option to combine them, the trims offer maximum design freedom.

Skirting

For acoustic panels

The skirting board in Ultra Matt Black provides a precise finish at the floor. The skirting board can be easily cut to the desired length. Practical extra: the integrated cable guide on the back allows cables to be laid out of sight. Ideal for installation of the LivingWall LED strip or for speaker or TV cables.

Good to know

Stable and easy to maintain
Made from high-quality HDF, our mouldings and skirtings boast stability, ease of maintenance and durability.

Our contribution to environmental protection
The mouldings and skirtings are PEFC certified – for responsible environmental management.

Clever function for acoustic panels in Scandi style

My SilentDesign LivingWall

SILENTDESIGN LIVINGWALL

Now the wall comes alive!

The LivingWall is the clever way to turn an acoustic wall design into a functional highlight – in a high-quality Scandi style. The key feature is the damage-free, simple and quick assembly and disassembly of all elements. This creates rooms with ambience and with added value intelligently created. Whether as a creative display for your favourite pieces, a practical shelf for your scarf, keys or umbrella and at the same time as an elegant eye-catcher – LivingWall has so much to offer. Equipped with shelves, hooks and clever storage solutions, it transforms any surface into a place that inspires wonder.

FUNCTIONAL WALL DESIGN

Wonderfully organised!

Bring your walls to life by installing acoustic panels anywhere in your home. With clever LivingWall elements such as shelves, hooks, or integrated lighting elements, you can create completely new favourite places in your home. Spotlights in the bedroom or in your favourite reading spot.

You can design a stylish cloakroom with shelves, hooks and pegs. Or upgrade your office by putting up practical and functional shelves.

So functional

The articles from **LivingWall Function** include shelves, hooks, wooden pegs, fixing elements, and even a plant pot ring for your favourite plant.

So illuminating

Lighting ideas for the wall with spotlights, wall lights and LED stripes with **LivingWall Light**.

**Shelves and hooks
made of premium metal**

**Simple assembly
and disassembly**

**LED lighting system
for flexible use**

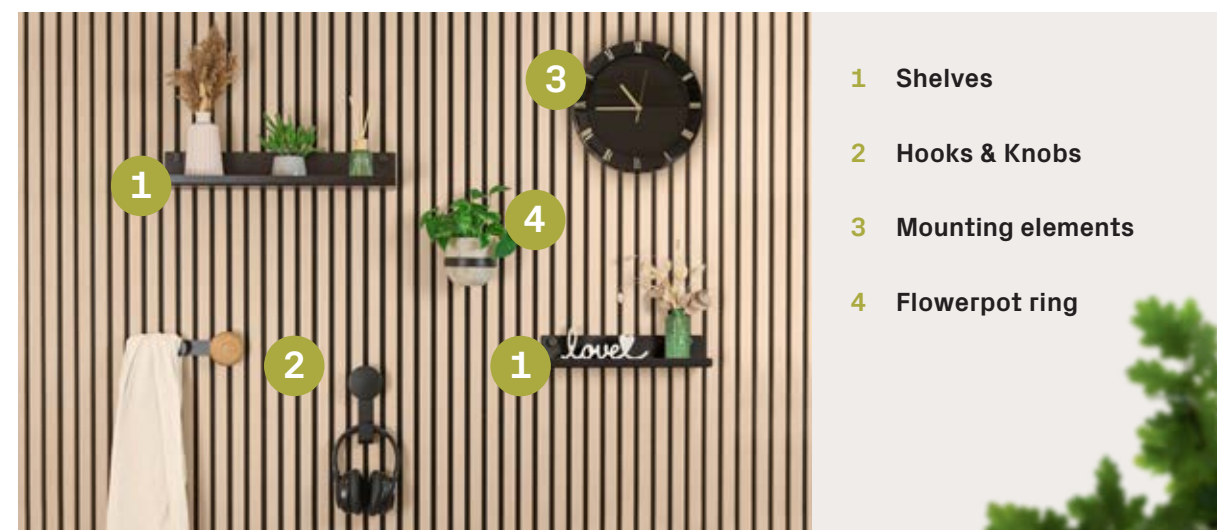

**Pegs made from fine,
genuine wood**

THE RANGE

Everything at a glance

LivingWall Function

With these items, LivingWall Function makes storage a practical and aesthetic matter. Arrange as desired, rearrange at any time and customise everything to best suit the owner's lifestyle. This idea gives the product its name.

- 1 Shelves
- 2 Hooks & Knobs
- 3 Mounting elements
- 4 Flowerpot ring

LivingWall Light

Light that loves design finds a perfect home in LivingWall. Our lighting ideas can be flexibly installed in SilentDesign panels. Repositioning or realigning? Can be done effortlessly at anytime.

- 1 **Spotlight**
The spotlight can light for up to 5 hours, is very easy to remove using a magnetic system and can be recharged via USB.
- 2 **Cube wall light**
In addition to the functions of the spotlight, the Cube has a motion detector. If you want to play with light, you can vary the angle of the light cone.
- 3 **LED Stripe**
The LED Stripes create a warm ambience. Up to 3 LED Stripes can be connected to one transformer and are variably dimmable by remote control.

REALLY CLEVER

Installation with PEB

PEB stands for PropEyeBolt – the assembly screw specially designed for LivingWall can place all elements quickly and securely in any position using a simple screwdriver. It is easy to remove and can be easily re-attached in a different position without causing any damage.

Belonging together

Our system consisting of SilentDesign acoustic panels and LivingWall is TÜV-certified and in many cases can even withstand higher loads than required. All LivingWall elements with PEB can also be used with other acoustic panels that are stapled and have a PET felt density of $> 1,500 \text{ g/m}^2$ and a slat spacing of between 13 and 18 mm. The use of LivingWalls requires acoustic panels to be screw-connected to the wall. Our SilentDesign acoustic panels have an extra-strong felt with a density of $1,800 \text{ g/m}^2$.

SHELVES, KNOBS, FLOWERPOT RING & MORE

LivingWall Function

With square panels, the shelves can only be installed if the slats are horizontal.

SUSTAINABILITY

Consumers can trust ter Hürne panels

All of the wood experts' products are designed to harmonise quality, design, function and sustainability. The wood for all ter Hürne panels is sourced from sustainably managed forests. SilentDesign FSC 100% certified, the products of the UniqueDesign panels are all PEFC certified. Each component is tested through and through, including with regards to fire safety performance it goes without saying. They also supersede the legal requirements for products designed for healthy living and do not release any harmful emissions into the environment.

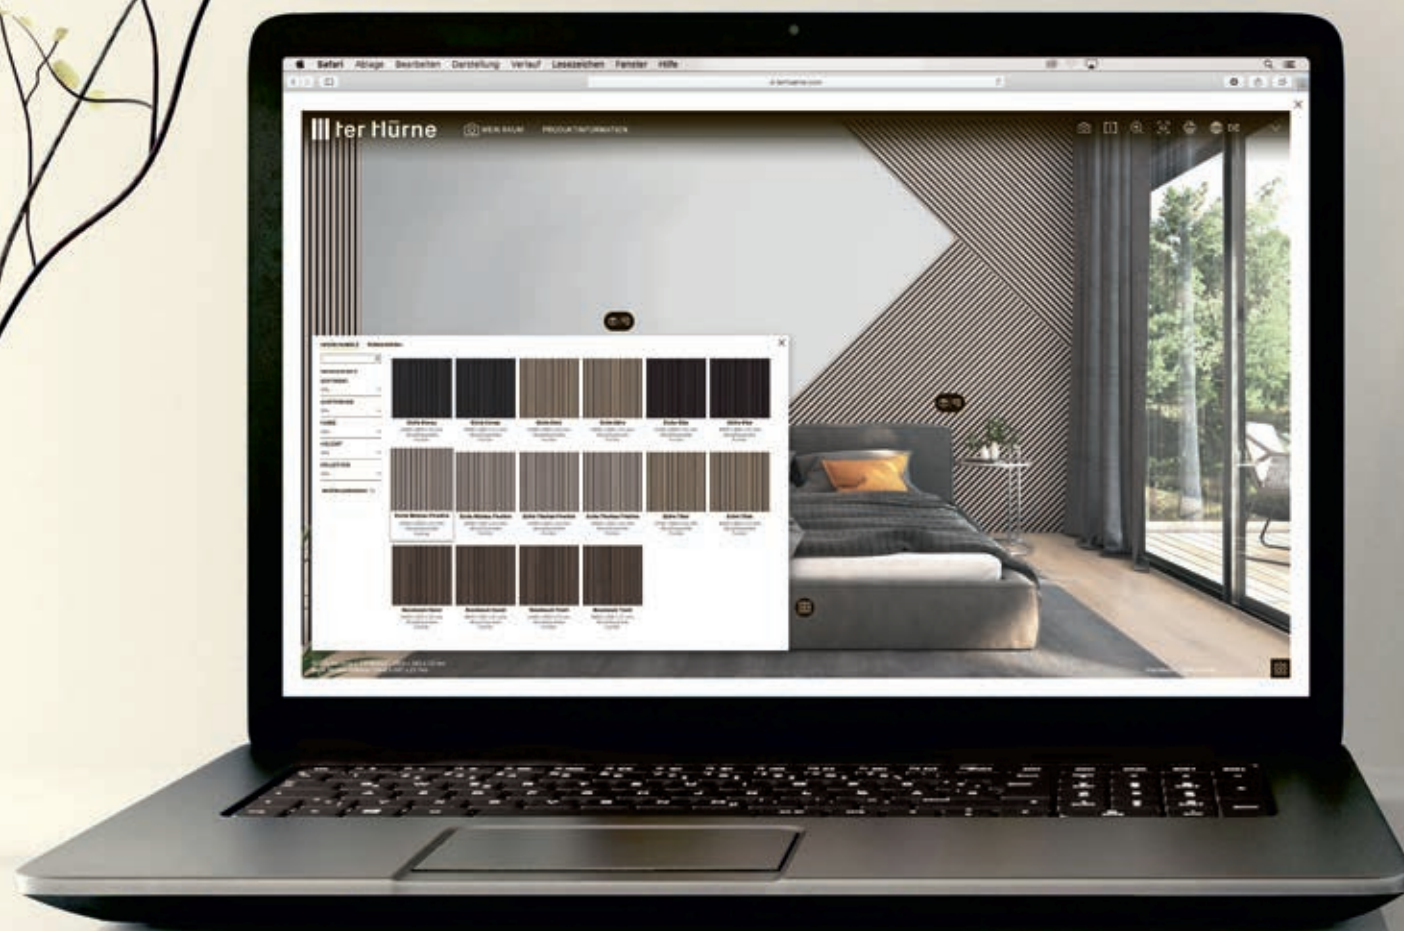

MY VIRTUAL PANELS

My Room Studio

Our virtual room studio lets you visualize our panels in your own home. To do this, simply select room images from our gallery then virtually install your desired panels there. The choice is yours: with your smartphone, tablet, laptop or desktop computer you can use our virtual room studio to view the acoustic panels in your home. Due to the size of the screen, this is sometimes the better alternative. To do this, simply click on the right edge of the screen on the "Room studio" button.

Scan here and virtually install your panels!
